

Question 1

Question 2

Instruction	Volume in A	Volume in B
Fill B	0	8
B → A	3	5
Empty A	0	5
B → A	3	2
Empty A	0	2
B → A	2	0
Fill B	2	8
B → A	3	7
Empty A	0	7
B → A	3	4

To fill 4 litres of Boza, I decomposed and abstracted the puzzle to that point where I realized only one of the containers which had the capacity of 8 litres could have 4 litres. First I filled the B container, transferred it to A which was then emptied. This was repeated until I had 2 litres left in B which then were transferred to A. Container B was filled again and transferred to A which led to 7 litres remaining in B, after emptying A and transferring from B to A again I had 4 litres of Boza in B container. Hence a pattern and a sequence was followed to solve the problem.

Question 3

It's not possible to complete the tour with passing each of the bridges once. Decomposing the problem lead to a path which will successfully cover all bridges except 15 Temmuz Şehitler Bridge and Atatürk Bridge – passing through all regions. Since we need to pass all the bridges and tunnels, after abstraction, we can put one additional tunnel between Region 1 and 4. This will complete the path which will ensure a route that includes all the bridge and tunnels.

The Path will be:

Region 1 → Yavuz Sultan Selim Bridge → Region 2 → Fatih Sultan Mehmet Bridge → Region 1 → Avrasya Tunnel → Region 4 → Galata Bridge → Region 3 → 15 Temmuz Şehitler Bridge → Region 1 → New Bridge → Region 4 → Atatürk Bridge → Region 3 → Haliç Bridge → Region 5.
